1911 Lorings Crossing • Cortland, NY 13045  
(800) 622-5636

Suit-Kote Corporation owns and operates two regional quarries. Both operations are located in Cortland, NY and provide the backbone for our liquid asphalt and highway construction divisions.

Through the use of an under water mining process we are able to keep the dust down making us a desirable neighbor in our industrial zoned community. We also utilize a conveyor transportation system that keeps much of the large haul trucks parked throughout the work day minimizing noise and air pollution.

As a result of our geographic location, we have a rather healthy supply of sand and gravel with reserves projected to last for the next thirty years. This coarse rock can be broken down to create a wide variety of products with each meeting NYSDOT specifications.

In addition to the aggregate used in the paving process, our quarries are rich in high quality concrete sands used in building. Our main mining facility in Polkville is also home to two blacktop plants with easy access making it a no hassle stop for our municipal and private customers alike.

We are also operating on the cutting edge in the area of utilizing recycled asphalt pavement (RAP) in many of our mixes. We have a large capacity for storage of RAP and have built storage barns that keep it from accumulating any unnecessary moisture as a result of precipitation.

## OUR PRODUCTS

- ✓ Blacktop
  - Low Emission Asphalt (LEA)
  - Conventional
  - Driveway
  - Marshall
  - Superpave
  - Cold Patch
  - Modified Cold Patch
  
- ✓ Aggregates
  - 1 A's
  - 1's
  - 2's
  - Native Crusher Run
  - Concrete Sand
  - Coarse Sand
  - 1 B's
  - Mason Sand
  - Bedding Sand
  - Top Soil
